

RADWIN Academy Services Overview

Innovative technology is great, but successful implementation of a new system requires preparation across the organization. Knowledge is the key to smooth adoption of the technology by network teams and optimal completion of their technical tasks using RADWIN broadband wireless solutions.

Our training services enable your team making the most out of RADWIN technologies, offering a comprehensive, focused and cost-effective training solutions. Our standard and tailor-made training programs are designed to support every stage in the planning, deployment, operation and maintenance processes.

RADWIN training portfolio is built of a wide variety of modern learning solutions, including class presentations and hands-on exercises, online webinars and hands-on using a Remote Lab. RADWIN professional training team oversees the methodology, quality, efficiency and relevance of training programs and materials. All the courses are delivered by experienced RADWIN engineers who combine field experiences with rich background in training didactics.

RADWIN standard courses include:

- Deployment - provides hands-on skills in installing, aligning and commissioning of RADWIN systems
- Operation – guides operational teams through system theory, installation, configuration, operation and basic troubleshooting procedures
- Network Management – introduces the tools and procedures for effective network monitoring and optimization
- Network Design – teaches network engineers how to properly plan RADWIN networks using dedicated software tools
- Train-the-Trainer – certifies selected RADWIN Partners to offer and deliver RADWIN certification courses

In addition, RADWIN will customize any training program according to customers' specific needs, requirements and technical level.
